

1    **Abstract of Disclosure**

2    A club-carrying apparatus includes a bag and a frame. The frame  
3    includes an annular element, a sternum-like element and at least one  
4    rib-like element. The annular element is attached to an upper portion of  
5    the bag. The sternum-like element extends from the annular element  
6    and includes a bone and a skin covering the bone. The rib-like element  
7    intersects the sternum-like element and includes a bone and a skin  
8    covering the bone. Each of two partitions includes a lower portion  
9    attached to the bag and an upper portion attached to the bone of the  
10   sternum-like element. Another partition includes a lower portion  
11   attached to the bag and an upper portion attached to the bone of the  
12   rib-like element.
